

\$BSI · Solana

The token is optional. The product is not.

\$BSI is a community token launched alongside BSI, the Solana memecoin research tool at bultecx.si. It is not needed to use BSI, it does not unlock features, and it is not a share in the company or its revenue. This page lists what the token is, how it was launched and what the team holds, so you can check it against the chain.

- Any later team sale is made from the listed wallets only.
- No other wallets are funded by the team to buy \$BSI.

WHAT \$BSI IS NOT

- Not a requirement for BSI. Access is the free allowance or the 0.1 SOL day pass.
- Not a share, dividend or revenue claim.
- No promised buybacks, burns or price support.
- Not an investment product. No returns are offered.

Check it yourself

Paste the contract address into BSI or any explorer. Mint and freeze authority, holder concentration and LP status are public on-chain. BSI's own token check applies the same rules to \$BSI as to every other token: buyers next to exits, linked wallets flagged, no score.

Official links are only those on bultecx.si. Any other "\$BSI" contract is not ours.

Not advice. High risk. Memecoins are extremely volatile, usually illiquid and can lose all of their value. \$BSI has no intrinsic value and gives no rights against the BSI team or anyone else. Nothing here is an offer, a solicitation or a recommendation to buy or sell. Do your own research and only use money you can afford to lose. Availability may be restricted in some jurisdictions.
